Subject: RE: Colorado Initial Notification of Potential Exceptional Event (9/2/17 & 9/4/17)
Date: Tuesday, January 16, 2018 10:55:00 AM

Thanks Greg.

Since all the values indicated in the addendum are less than the current ozone standard, and all the indicated sites have preliminary 2015-2017 design values less than the NAAQS, these additional sites are not covered by the exceptional events rule, which specifically applies to events which impact exceedances or violations on the NAAQS. Feel free to include discussion of these data in demonstrations for other exceeding or violating monitors, but since these are not exceedances or contributing to violations on the NAAQS, and would not be anticipated to play a decisive role in any EPA rulemaking, EPA would not expect to concur or non-concur on flags on data from these monitors on these days.

Let me know if you have questions.

Richard,
Upon closer review of the 9/2/17 and 9/4/17 ozone exceptional events, as described in Colorado's Initial Notification of Potential Exceptional Event for Ozone Events on 9/2/17 and 9/4/17 letter, the APCD has identified additional data from additional sites that are to be considered for exceptional event exclusion. The attached letter summarizes this additional data and is to serve as an addendum to Colorado's first initial notification letter. Please feel free to contact me with questions or comments.

Regards,
Greg

Richard,
Attached is a letter of Initial Notification of Potential Exceptional Event for ozone events on 9/2/17 and 9/4/17 in the Northern Front Range. The wildfire smoke component of theses

events and its significance to the observed elevated ozone concentrations has been evaluated and verified. Please feel free to contact me with questions or comments.

Regards,
Greg
